

Project description: This project is to design a personal homepage using Bootstrap. The personal page includes contact information and is deployed on the Github Page. This page is designed based on a Bootstrap resume template.

Persona:

Name: Yunxiao Li

About: Hi, my name is Yunxiao Li from China. I'm an align student and previously majored in Physics. I'd like to play some strategy PC games in my spare time.

User stories:

I have studied Physics for several years at Sun Yat-sen University in China, which has laid a solid mathematical foundation for my future study in computer science. In 2019, I chose to dive into the computer science world and worked as a software engineer at Dragon Spring Technology - a software company located in Guangzhou, China, for about one year. In 2021, I became a CS align graduate student at Northeastern University.

This website is designed based on Bootstrap. My goal is to create a simple personal website for my first-course project, which is pretty simple. I add a mask layer as a welcome screen. The index page includes a navbar and some of my personal details.
